PRIYANKA YADHAV

Software Engineer | AI / LLM Applications | Python and JavaScript

India |Email | Linkedin |GitHub |Portfolio

PROFESSIONAL SUMMARY

Software engineer with 4+ years of full stack experience and 1 year of hands-on work building LLM applications, RAG pipelines and agentic workflows in Python. Built a LangGraph data quality agent with a human-in-the-loop approval gate and verified re-scanning, and RAG pipelines on vector databases for logistics data. Strong in prompt engineering and MCP integration, and in measuring whether model output is correct, not just plausible. Holds a Master of Computer Applications and a Post-Graduate in Applied AI Development. Delivered a supply chain analytics solution that raised profit by 15% and cut waste by 30%. Works well with science, data engineering and product teams.

TECHNICAL SKILLS

- **LLMs and Agentic AI:** Large Language Models (LLMs), Generative AI, agentic workflows, LangGraph, LangChain, MCP (Model Context Protocol), RAG pipelines, vector databases, prompt engineering, model integration and inference
- **Evaluation and Quality:** model evaluation, inference accuracy and performance testing, human-in-the-loop review, Pydantic validation, unit and integration testing, code review
- **Languages:** Python (primary), JavaScript, SQL, PHP, HTML5, CSS3, jQuery, Data Structures and Algorithms, OOP
- **ML and Deep Learning:** PyTorch, TensorFlow/Keras, Scikit-learn, model fine-tuning, encoder-decoder and sequence models, attention mechanisms, Logistic Regression, Random Forest, forecasting, statistical modelling
- **Data and Feature Engineering:** Pandas, NumPy, MySQL, ETL, data preprocessing and cleaning, feature engineering, EDA, large-dataset pipelines, Power BI, Tableau
- **Engineering and Tools:** Git, CI/CD, Agile/Scrum, production support, Jira, Confluence, AWS and IBM Cloud (basic), Linux (basic)

PROFESSIONAL EXPERIENCE

AI Software Developer Intern, Vosyn | Ontario, Canada | May 2024 - August 2024

- Worked with the AI team to design, build and optimize ML models (XTTS-based voice cloning), contributing to model architecture decisions and inference performance tuning.
- Processed large-scale datasets and modified data pipelines to improve model training efficiency and support integration into production workflows.
- Joined code review and testing cycles, finding and fixing issues and documenting workflows to uphold engineering standards.

Software Engineer (Full Stack Developer), Sixth Energy Technology Pvt Ltd | Karnataka, India | July 2019 - August 2023

- Built and optimised RAG pipelines on vector databases, improving retrieval accuracy and access to logistics and SCM data insights.

- Applied LLMs and prompt engineering to supply chain and logistics analytics use cases, integrating models with data science partners.
- Partnered with Science and Data Engineering teams to integrate and validate ML and object detection models, evaluating inference accuracy and performance across multiple test cases.
- Designed and optimised MySQL schemas and queries (joins, indexing) for reliability and scale, integrating cleanly with front-end systems.
- Provided production support and issue resolution for live systems in an Agile process, reducing production defects through unit and integration testing.
- Wrote clean, well-tested, production-quality code in HTML5, CSS3 and jQuery for responsive, mobile-first web interfaces, following coding standards and regular code reviews.

PROJECTS

- **Data Quality Auditor (agentic workflow):** Built a LangGraph pipeline combining a deterministic pandas scanner (11 check types) with an LLM fix planner, a human-in-the-loop approval gate, and verified re-scanning, reducing issues from 13 to 4 on a 1,030-row test dataset. (Python, LangGraph, LangChain, Pandas, Pydantic)
- **Supply Chain Analytics Solution:** Delivered end-to-end analytics integrating ML model outputs into forecasting and demand-planning services, achieving a 15% profit increase and 30% waste reduction. (Python, SQL, JavaScript, Web Technologies)
- **Voice Cloning (XTTS):** Built a system to generate realistic synthetic speech from limited audio, covering data collection, preprocessing, model fine-tuning and inference evaluation. (Python, PyTorch, Audio Processing)
- **Airline Passenger Satisfaction Prediction:** Developed and evaluated Logistic Regression and Random Forest models reaching 90%+ accuracy, with feature engineering and dashboarding. (Python, Scikit-learn, Statistical Analysis)

EDUCATION

Post-Graduate in Applied AI Development, George Brown College | Canada | Sep 2023 - Aug 2024

Master of Computer Applications (MCA), CMR Institute of Technology | India | Aug 2016 - Jun 2019

CERTIFICATIONS

- Generative AI Fundamentals, Coursera
- Microsoft Azure Fundamentals, Microsoft Learn
