PRIYANKA YADHAV

Software Engineer specialized in Artificial Intelligence

Summary

Software Engineer with 4 years of experience in JavaScript-based application development , transitioning into AI Engineering after completing a Postgraduate program in AI Solutions Development. Strong foundation in Python, Machine Learning algorithms, and statistical data analysis. Passionate about building intelligent , data-driven systems and deploying scalable ML solutions

EXPERIENCE

Forward Insurance Managers Ltd **Ontario , Canada**
Configuration Analyst - Contract **July 2025 - September 2025**

- Gained practical expertise in setting up systems and configuring applications.
- Under supervision, I assisted in analysing needs and executing simple configuration adjustments, and supported the team in testing configuration updates and troubleshooting minor issues.
- Learned how to create documentation for configuration procedures and steps.Worked in tandem with top analysts to comprehend configuration management best practices. Competent with Confluence Dashboard and JIRA.

Vosyn **Ontario , Canada**
AI Software Developer Intern **May 2024 - July 2024**

- Worked together with the AI team to develop, test, and improve machine learning models. And helped with the processing and analysis of massive data volumes for the training of AI models.
- Assisted in identifying and fixing problems during the testing and development stages. Encouraged the assessment and application of innovative coding methods and technology to improve AI solutions.
- Clearly and succinctly documented development processes and findings

Sixth Energy Technology Pvt Ltd **Karnataka, India**
Software Engineer **July 2019 - August 2023**

- Using HTML5, CSS3, and jQuery, I created user-friendly, responsive web interfaces with a mobile-first design to ensure cross-device compatibility.
- 30% faster API response times were achieved by designing and implementing scalable, reliable backend services
- MySQL was used to manage data operations, perform sophisticated manipulations (joins, indexing), and ensure seamless integration with front-end systems by optimising queries and schemas.
- Built and optimized RAG pipelines by integrating vector database for efficient document retrieval, improving accuracy of SCM data insights
- I also used tokenization and Gen Ai to extract insights, automate reporting and enhance data-driven decision making
- Conducted unit and integration testing and maintained over 85% test coverage, reducing production bugs and increasing confidence in deployment cycles.
- Actively took part in Agile development processes and reduced production defects by maintaining over 85% test coverage through unit and integration testing.

SKILLS

Programming skills: Python, JavaScript, HTML, CSS, SQL
BI & Analytics Tools: Tableau Desktop, Tableau Server, Looker, LookML
Data Visualization: Dashboard Design, Data Storytelling, Insight Communication, Enterprise Data Presentation
Machine Learning & AI: Machine Learning, Deep Learning, Statistical Modeling, Model Evaluation, Feature Engineering, Confidence Intervals, Error Analysis, Dataset Development
Frameworks & Tools: TensorFlow, PyTorch, Scikit-learn, NumPy, Pandas
Data & Big Data: ETL Concepts, Big Data Processing, Data Analysis

Cloud & Tools: Exposure to Cloud Platforms, Git, CI/CD
Software Engineering: Data Structures & Algorithms, Secure SDLC, Code Reviews, Testing, Debugging, Performance Optimization
Collaboration & Process: Agile/Scrum, Design Reviews, Technical Documentation, Cross-Functional Collaboration

PROJECTS

ETL – Job Fraud Detection : An end-to-end ETL and machine learning pipeline that detects likely-fraudulent job postings. Raw job listing data is cleaned and transformed into structured fraud-signal features, loaded into a relational database, and used to train a classifier that flags suspicious postings.
Voice Cloning: Its advanced voice cloning system leveraging state-of-the-art extreme Text-to-Speech (XTTS) models to create highly realistic and natural-sounding synthetic voices. The project involved the collection, processing, and fine-tuning of a deep learning model to accurately replicate a target speaker's voice from a limited amount of audio data.
Supply Chain Analytics Solution : Delivered end-to-end analytics for SCM using Python, SQL, and visualization tools.Provided insights that supported forecasting and demand planning decisions. Which helped in increasing 15 % profit and reduction of waste up to 30%.
Airline Passenger Satisfaction: Built a successful project predicting passenger satisfaction levels using ML models trained on survey data achieve over 90% accuracy. Applied EDA, feature engineering, and scikit learn libraries to build predictive models using LR and RF. Built good data Visualisation dashboards to showcase the prediction.

EDUCATION

George Brown College — Ontario , Canada
Post-Grad in Applied AI Development — September 2023 - August 2024
CMR Institute of Technology — Karnataka, India
Master's in Computer Application — August 2016 - June 2019
